

Vansh Kanojia

Cortlandt Manor, NY 10567 | vansh.kanojia@pace.edu | (914) 849-8923 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Pace University

B.S. in Computer Science | **Minor:** Cyber Security | **GPA:** 3.98

Achievements: Academic Recognition Certificate Spring 2023 | Dean's List Fall 2023 - Spring 2025

Pleasantville, NY

December 2025

SUNY Westchester Community College

A.S. in Computer Science & A.S. in Accounting and Finance

Valhalla, NY

December 2023

RELEVANT COURSEWORK

Data Structure | Algorithms & Computing Theory | Java Application Development | Operating Systems/Architecture | Software Engineering | Penetration Testing & Ethical Hacking | Information Risk Management | Network & Internet Security

TECHNICAL SKILLS

Programming / Scripting Languages: C++ | C | Python | Java | HTML | CSS | JavaScript | Shell/Bash | SQL | TypeScript | Go

Database Management: MySQL | PostgreSQL | MongoDB | Oracle Cloud Infrastructure | Supabase | AWS | InfluxDB | TimescaleDB

Frameworks / Tools: Git | VS Code | Figma | Agile/SCRUM | React.js | Flask | AngularJS | React Native | FastAPI | Django

EXPERIENCE

KixBax (Early-stage Startup), Software Engineer

June 2025 – Present

- Created interactive Figma mockups and detailed user stories to define user flows and establish the product design direction
- Planned the technical infrastructure, cloud budgets and database schema, laying the groundwork for a scalable, cloud-based architecture utilizing AWS (EC2, ELB, Lambda)

Blue CoLab, Software Developer Intern | Pleasantville, NY

July 2024 – Present

- Led team of 3 technology student interns creating sonification app, implementing Python Flask, Pandas & Matplotlib analyzing files to convert CSV into MIDI/WAV files
- Designed data graph visualization with Matplotlib, researched the effect of different normalization algorithms
- Managed normalization project of an annual 40,000 row dataset with Pandas & NumPy removing defective rows, using treated data to make a Discord Bot reporting faulty data and hardware outages in real-time reducing down-time by 75%
- Fine-tuned Segment Anything Model (SAM) for computer vision to identify duckweed in local pond, integrating results with environmental sensor data to support pond remediation efforts through pattern recognition and classification
- Executed database & API migration from NoSQL Influx DB to PostgreSQL Timescale DB, ensuring seamless transition without downtime or data loss
- Developed Django app automating PDF-to-database ingestion by using Camelot to extract tabular data from annual water report PDFs, parsed the output into CSV, and inserted data into a MariaDB database for querying and analysis

Operational Technology Assistant Sponsored by Con Edison | Pleasantville, NY

September 2024 – May 2025

- Implemented control logic using OpenPLC Editor, developing Ladder Diagrams to simulate operational technology (OT) process in an automated environment
- Built Python Django human-machine interface (HMI) to monitor and display real-time OpenPLC coils for OT Applications
- Used Social Engineering Toolkit to harvest user credentials cloning websites for HTTP POST requests on local network

PROJECTS

Elby | Automated record keeping iOS App for STRs | React Native & Supabase

September 2024 – December 2024

- Launched Elby on the [App Store](#), ensuring full compliance with Apple's guidelines, privacy policies, and security standards. Continuously gathered user feedback, implemented iterative updates, and enhanced features
- Implemented real-time background geofencing and location tracking to automate property visit logs & mileage tracking
- Streamlined IRS filing processes for users with on-the-go PDF statements, reducing annual filing time by approximately 30 hours through automation and workflow optimization

Decimal Budget | Java, MySQL, SQL Queries

November 2023 – December 2023

- Engineered Java app with authentication, transaction logging, & personalized features with functional SQL queries allowing users to track expenditures against pre-set budget, storing authentication & financial data in MySQL
- Designed GUI using JavaFX with 3 menus, allowing users to create editable & categorized budgets, integrating SQL queries to retrieve and store data
